

~ This Book is Dedicated to Dennis Jackson ~

We want to dedicate this year's analysis summary to Denny Jackson. For many years it was Denny who compiled and produced the analysis summary for South Central Minnesota.

Denny died in July 2004 after a battle with lung cancer. He was Dean of the Agribusiness and Management Education Department at South Central Technical College from 1986 - 2004. Denny built quite a list of accomplishments, and received many accolades during his all-too-short lifetime.

With the death of Denny, we have lost one of the real leaders in the nation in the field of management education. But more importantly, the life of a generous and caring family man, professional educator and true friend was ended much too soon. Those of us who were privileged to know him and work with him will always be influenced by his example.

**Celebrating 50 Years and Looking Forward
Minnesota's Farm Business Management Program**

Half a century later, after serving thousands of farm businesses, Farm Business Management Education in Minnesota is celebrating its golden anniversary. But it's not stopping there. Like any enduring, reliable organization or relationship, this program has vision, values, and goals to sustain it through unpredictable times.

Historically, Farm Business Management Education has been a part of Education Programs in Minnesota high schools at post-secondary levels since 1953. From the early cooperative efforts of the State Department of Education and the Department of Agriculture Education (University of Minnesota) the program has expanded to serve over 5,000 farm businesses each year in Minnesota. The Farm Business Management Program is now an integral part of the Minnesota State Colleges and Universities System (MnSCU).

A total of 750 farm business records were submitted to the Analysis Center prior to the date that averages were processed. On the basis of accuracy and completeness, 741 of these were included in this report. This report contains whole farm financial summaries and enterprise data for the major crop and livestock enterprises produced in South Central and Southwestern Minnesota. Additional data can be accessed at the MnSCU Farm Business Management website at www.mgt.org.

INTRODUCTION

Farm Business Management Education Programs have been a part of the Agriculture Education program in Minnesota since 1952. From the early cooperative efforts of the State Department of Education and the Department of Agriculture Education at the University of Minnesota, the program has expanded to serve over 5,000 farm families annually in six farm management regions. Programs are now administered and managed by the Minnesota State Colleges and Universities System through the Technical Colleges.

The purpose of farm management education is to help farm families achieve their farm business and family goals. This is done through improved management, organization and efficiency of their farm operations. This purpose has not changed over the years.

To accomplish these purposes, programs have been organized to conform to the following guidelines:

1. Farm families enroll in specific management courses.
2. Each course has specific goals and objectives.
3. Courses are offered in sequence and farm operators are expected to enroll in the first of the sequence of courses.
4. There is a continuity to each course. Each leads to the next course in the sequence.
5. Instruction occurs both in the classroom and at the farm with the farm family.

Programs organize their courses around the same central theme:

Level 1 - Introduction to Farm System Management

Level 2 - Farm System Analysis and Evaluation

Level 3 - Interpreting and Modifying Farm System Management Plans

Level 4 - Farm System Trends and Projections

Level 5 - Integrating Current Information into Farm System Plans

Level 6 - Examining the Context of Farm System Management Plans

Like most educational programs, students benefit from the instruction in relation to how much effort they put into study and application. Some farm operators have benefited more and some less, depending on how seriously they studied the results of their annual business analysis and the kinds of decisions they have made as a result of their analysis.

Farm Business Management education programs became course/credit based in 1992. Each individual enrollee completes a needs assessment with the instructor, after which the student enrolls in coursework to meet these needs. A typical farm business management student registers for 10 semester credits per year. The purpose of this effort is to more adequately address the needs of the individual farmer, making enrollment even more beneficial.

The tables in this report were created using Finpack and RankEm Central, copyrighted software of the Center for Farm Financial Management, University of Minnesota. The Analysis of the records and preparation of the report for the South Central and Southwestern area are done under the direction of Al Bruderie, Regional Dean of Management Education, at South Central Technical College, Mankato and Minnesota West Community and Technical College. Directing in a supervisory capacity are:

Keith Stover, President, Dr. Larry Lundblad, Senior Vice President, South Central Technical College; Dr. Ron Wood, President, and Dr. Diane Graber, College Provost, Minnesota West Community & Technical College; and John Murray, State Program Manager, Minnesota State Colleges and Universities. Assistance in the preparation of this report was done by Darlene Jones and Suzanne Lovell.

OVERVIEW OF FARM FINANCIAL STATEMENTS

Farm Income Statement -- pages 9-12

This is a summary of income, expenses and the resulting profit or loss from operations. The Farm Income Statement is divided into two parts -- Income and Expenses. The income portion provides a detailed picture of cash farm income flowing into the business. The Expense portion of the statement is further divided into three sections providing cash expenses, inventory changes, and depreciation and other capital adjustments. Inventory changes, depreciation and other capital adjustments (shown in more detail on pages 12-13) are accrual adjustments to Net Cash Farm Income, which result in Net Farm Income -- a more accurate reflection of actual farm business profitability. Net Farm Income represents the return to the operator's and family's unpaid labor, management, and equity capital investment.

Profitability and Liquidity Measures -- pages 13-14

These reports provide a number of measures of performance. Profitability measures the value the farm has produced for the resources contributed. Measures reported (net farm income, labor and management earnings, rate of return on assets, rate of return on equity, operating profit margin, and the asset turnover rate) are calculated with assets valued at both cost and market basis.

Liquidity measures the ability of a business to meet its financial obligations; including family living, taxes and debt payments. Measures reported (the amount available to service intermediate debt and the years required to turnover intermediate debt) are provided on both a cash and an accrual basis. Both measures are determined after providing for family living and taxes, and for servicing real estate debt.

Balance Sheets -- pages 15-16

Two separate Balance Sheet reports are provided, one at cost basis and the other at market basis for assets. These balance sheets provide a categorical listing of all assets, liabilities, and equity.

Solvency measures are also provided on the Balance Sheets. The percentages shown represent the percent in debt for current assets, current & intermediate assets, long term assets, and the total assets of the business.

Statement of Cash Flows -- page 17

This table reports all the sources from which cash was generated, where cash was used, and what remains at year-end. It starts with the Beginning Cash Balance and concludes with the Ending Cash Balance. Cash from Operating Activities represents inflows and outflows from ordinary farming and non-farm activities. The result is a net Cash from Operations. Cash from Investing Activities reports the cash inflows and outflows from the purchase and sale of farm and non-farm assets and investments. The result is a net Cash from Investing Activities. Cash from Financing Activities represents cash inflows from money borrowed and gifts received, and outflows for principal paid and gifts and dividends given. The result is a net Cash from Financing Activities. The Net Change in Cash Balance is the sum total of the cash position from each of the three activities.

Crop Production and Marketing Summary -- page 18

This table contains three sections. The Acreage Summary reports the owned and rented acres in the farm business. The Average Price Received section reports the average prices received for crops sold -- actual sales only. The Average Yield per Acre section reports the average yields of the various crops produced. Results are shown only where there was a total of five or more in the group.

Financial Standards Measures -- page 20

The Financial Standards Measures are the sixteen financial measures selected by the Farm Financial Standards Task Force of the American Bankers Association. These ratios are explained on page 20.

Operator and Labor Information -- page 21

The Operator and Labor Analysis summarizes the results per operator and the labor utilized in the operation of the farm business, both paid and unpaid. It also provides a calculated value of farm production per hour of labor, and a net farm income per unpaid hour. These measures could be considered measures of labor efficiency.

Household & Personal Expenses and Non-Farm Summary -- pages 22-23

The Household and Personal Expenses is a detailed summary of expenditures by farm households that maintained a record of their household spending. The Non-Farm Summary is a report of non-farm income, expenses and liabilities.

EXPLANATION OF FINANCIAL STANDARDS MEASURES -- Reported on Page 20 --

The Financial Standards Measures are sixteen ratios or values in the areas of Liquidity, Solvency (assets at market value), Profitability (assets at cost value), Repayment capacity, and Efficiency that can assist a farm operator in measuring the financial health of the business.

Current Ratio [current farm assets divided by current farm liabilities] indicates the extent to which current farm assets if liquidated would cover current farm liabilities. The higher the ratio, the greater the liquidity.

Working Capital [current farm assets minus current farm liabilities] is a theoretical measure of the amount of funds available to purchase operating inputs and inventory, after the sale of current farm assets and the payment of all current farm liabilities. Adequacy must be related to business size.

Farm Debt to Asset Ratio [total farm liabilities divided by total farm assets] expresses what proportion of total farm assets is owed to creditors. The higher the ratio, the greater the risk exposure of the business.

Farm Equity to Asset Ratio [total farm equity divided by total farm assets] measures the proportion of total farm assets financed by the owner's equity capital. It represents the owner's claim against business assets. The higher the ratio, the more total capital supplied by the owner and less by creditors.

Farm Debt to Equity Ratio [total farm liabilities divided by total farm equity] reflects the extent to which farm debt capital is being combined with farm equity capital, or the amount of borrowed capital being employed for each dollar of equity capital. The higher the ratio, the more capital supplied by creditors and less by the owner.

Rate of Return on Farm Assets [(net farm income from operations + farm interest expense minus value of operator and unpaid family labor & management) divided by average total farm assets] measures the rate of return on farm assets -- an overall index of profitability. The higher the value, the more profitable the farming operation.

Rate of Return on Farm Equity [(net farm income from operations minus value of operator and unpaid family labor & management) divided by average total farm equity] measures the rate of return on farm equity capital used in the farm business. The higher the ratio, the more profitable the farming operation.

Operating Profit Margin [(net farm income from operations + farm interest expense minus value of operator and unpaid family labor & management) divided by gross revenue] measures financial efficiency in terms of return per dollar of gross revenue. The higher the ratio, the more efficiency.

Net Farm Income [(farm revenues minus farm expenses) + the gain or loss on the sale of farm capital assets] represents the return to the farm operator for unpaid labor, management, and owner's equity.

Term Debt (and Capital Lease) Coverage Ratio [(net farm income from operations + total non-farm income + depreciation expense + interest on term debt + interest on capital leases minus income tax expense minus withdrawals for family living) divided by (annual scheduled interest and principal payments on term debt + annual scheduled interest and principal payments on capital leases)] measures the ability of the borrower to cover all term debt and capital lease payments. The greater the ratio, over 1:1, the greater the margin to service the payments.

Capital Replacement (and Term Debt Repayment) Margin [net farm income from operations + total non-farm income + depreciation expense minus income tax expense minus withdrawals for family living minus payments on old operating debt minus principal payments on current term debt minus principal payments on current capital leases minus total payments on personal liabilities] evaluates the ability of the farm operator to generate the funds necessary to repay term debt with maturities over one year and to replace capital assets. The greater the number, the greater the ability to meet obligations.

Asset Turnover Rate [gross revenues divided by average total farm assets] measures how efficiently farm assets are being used to generate revenue. The higher the ratio, the greater the efficiency.

Operational Ratios reflect the relationship of expense and income to gross revenues. The sum of the first three expresses total farm expenses per dollar of gross revenue. The fourth ratio represents the residual of gross revenues remaining after the first three expenses are satisfied.

Operating Expense Ratio [(total operating expense minus interest expense) divided by gross farm income] is the proportion of gross revenue used to pay operating expenses. The lower the ratio, the more efficient the business.

Depreciation Expense Ratio [depreciation expense divided by gross farm income] is the proportion of gross revenues required to meet depreciation expense. The lower the ratio, the more efficient the business.

Interest Expense Ratio [total farm interest expense divided by gross farm income] is the proportion of gross revenues used to pay interest costs. The lower the ratio, the more efficient the business.

Net Farm Income (from Operations) Ratio [net farm income from operations divided by gross farm income] represents the residual after paying expenses. The higher the ratio, the more efficient the business.

EXPLANATION OF INDIVIDUAL CROP ENTERPRISE ANALYSIS

The individual crop enterprise analysis tables show acres, yield, value per unit (at harvest time), and gross return for each crop raised. Crops raised on owned and rented land are analyzed separately. This allows the farm business operator to evaluate the costs and returns for each individual crop.

Costs for seed, fertilizer, chemicals, fuel, repairs, custom hire, utilities, etc. are assigned to each crop by the farm operator and are termed *Direct Costs*. Other costs not directly assigned by the operator are called *Overhead Costs* and are allocated by formula. All costs are actual costs; no opportunity costs are included.

Be aware of two differences between the Owned Land and Cash Rented Land tables. On cash rented land, the land cost is identified and included in the Direct Cost section. In the case of owned land, the land cost is actually divided and reported on two different lines in the Overhead Cost section representing land ownership costs -- real estate taxes and interest on long term debt.

In addition to the average for each crop, farms are classified into low 20% and high 20% on the basis of returns to overhead costs. This classification is done separately for each table where there are at least five farms in the category.

EXPLANATION OF INDIVIDUAL LIVESTOCK ENTERPRISE ANALYSIS

Productive livestock enterprises are an important part of many Minnesota farm businesses. Many farms have one or more livestock enterprises. The following tables pertain to these livestock enterprises. Statistically, a larger data base provides more credibility. In an effort to increase the credibility and usefulness of the livestock enterprise analyses and to allow the inclusion of more livestock tables, statewide (rather than regional) data was used in computing the following livestock tables.

Costs that are easily charged to a specific livestock enterprise are termed *Direct Costs*. This category includes costs such as feed, veterinary costs, livestock supplies, custom hire, and marketing.

Other costs are less easily charged directly, and are allocated by formula. These are termed *Overhead Expenses*, and include things like interest, depreciation, dues, insurance, etc.

The table format varies slightly for the different livestock enterprises. Each begins with a calculation of Gross Return with income generated (product sales, market animal sales, cull breeding stock sales, value of butchers, and/or transfers out to other enterprises) minus costs incurred (purchases, transfers in) and adjusted for inventory changes. The Direct and Overhead Expenses are then applied to arrive at the Net Return from the enterprise, typically on a per cow, per head, or per cwt basis.

Each livestock enterprise analysis also includes *Other Information* that provides production and efficiency data that indicate the strengths and/or weaknesses of the enterprise.

* * * * *

AVERAGE PRICES USED IN THIS REPORT FOR FARM GROWN FEEDS -- 2004

Grains:

Corn	\$ 2.31 / bushel	Soybeans	\$ 7.30 / bushel
Oats	\$ 1.30 / bushel	Wheat	\$ 3.30 / bushel

Forages:

Alfalfa Hay	\$103.00 / ton	Legume Haylage	\$ 50.00 / ton
Mixed Hay	\$ 80.00 / ton	Corn Silage	\$ 16.00 / ton
Grass Hay	\$ 40.00 / ton	Oatlage	\$ 13.00 / ton
